Biofila stadslandskap i klimatförändringarnas tid

Halsbandsparakit, *Psittacula krameri*

- 
- A photograph of two bright green parrots perched on a thick, brown tree branch. The parrots have red beaks and are looking towards the right. The background is a soft-focus, light-colored scene of trees and foliage. The text is overlaid on the left side of the image.
- Städer är särpräglade karstlandskap
 - Klimatförändringar accelererar
 - Biologiska mångfalden utarmas

Biofilii - bandet till naturen

A close-up photograph of a human hand reaching into a shallow pond. The water is murky and filled with numerous small, dark tadpoles. The hand is positioned in the upper center of the frame, with fingers slightly spread. The background is a dense field of tadpoles, creating a textured, almost abstract pattern of dark shapes against the light brown water. The lighting is soft, highlighting the skin of the hand and the individual tadpoles.

Biofili-hypotesen handlar om att människor inte bara har en inneboende kärlek till allt levande, utan även ett nedärvt band till naturen och att avsaknaden av denna kontakt leder till ett nedsatt välbefinnande.

Biofil stadsutveckling!

Det levande invävt

Sinnliga vardagsoplevelser

Loftgångshus + parkering

Slott + barockträdgård

Slott + parkering

Loftgångshus + trädgård

Uppløvelserikedom

Till lövskuggornas lov

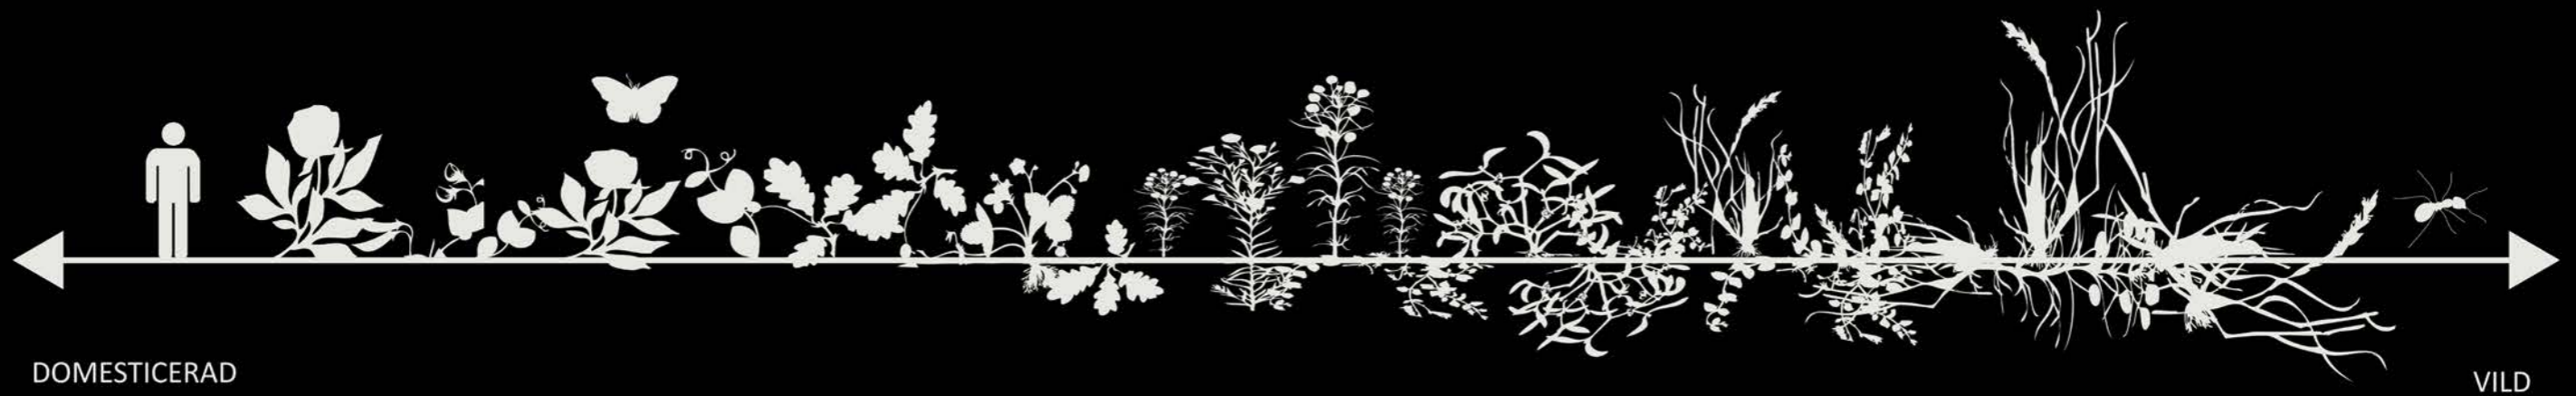

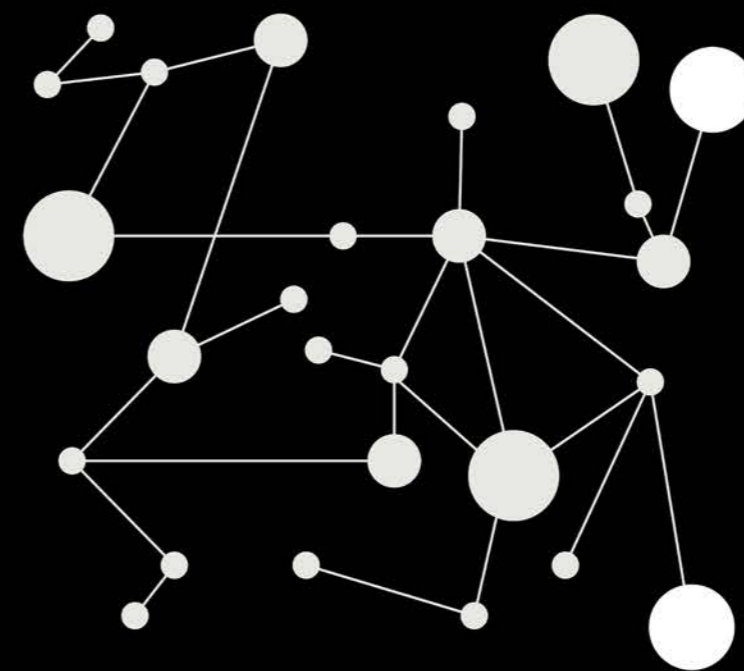

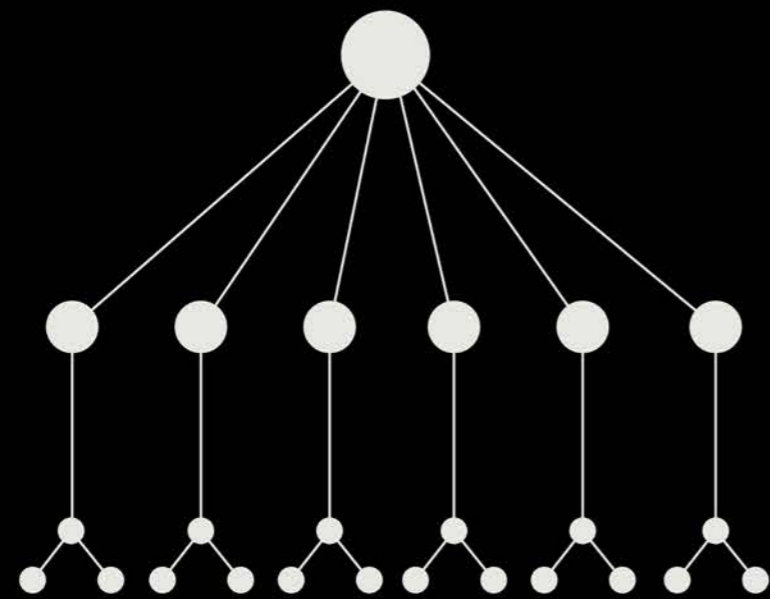

Grön (o)rättvisa!

Kvartersblandskogen

Naturtypologier

Det vildas estetik!

Blomstrande impediment

Torrängstak

Livet på taklandskapen

Förgårdsmarkens återkomst?

Substrat-revolutionen!

SOPE
